

SUMIT RAWAT

Software Engineer & Embedded Systems Builder

Delhi, India | 8851947954 | sumitrawat2417@gmail.com | github.com/sumitrawat2417 | linkedin.com/in/sumit2417

PROFILE

I build software and hardware around real problems, and I've been doing it since before it was resume material. ManSula BOS is an offline-first business operating system I run my own food cart on; alongside it there's an ESP32-S3 POS terminal in development and a smartwatch platform built from scratch. I'm also the founder of ManSula, so the product and business side of things aren't theoretical either. Looking for an engineering internship to build real products alongside experienced engineers.

EDUCATION

Indian Institute of Technology, Madras — BS in Data Science 2024 – 2028 (expected)
Indraprastha University, Delhi — B.Tech, Artificial Intelligence & Machine Learning 2024 – 2028 (expected)
Pursuing both degrees concurrently.

EXPERIENCE

ManSula — Founder & Software Engineer 2024 – Present

ManSula BOS — Business Operating System

React (PWA) | JavaScript | Local-first storage

- Built an offline-first business management app covering POS, inventory, CRM, staff, and reporting. Every module writes to one shared local database, so a single sale updates stock, the customer's ledger, and analytics at once.
- Run my own food cart on it every day, which is where most of the feature list actually came from. The udhaar (credit) tracking and smart cash calculator exist because I needed them at the till — not because they looked good on a spec sheet.
- Also handle the business side day-to-day — customer support at the cart, pricing decisions, and basic bookkeeping — alongside building and maintaining the software.

SELECTED PROJECTS

- **ManSula Smart Terminal** — developing a dedicated ESP32-S3 POS terminal based on the same business logic as ManSula BOS: dynamic UPI QR generation, voice payment confirmation, and a local wallet. In progress.
- **DivSum Ecosystem** — a smartwatch platform developed independently across the wearable OS, ESP32-S3 hardware, firmware, and companion app.
- **MapLok** — a local-business discovery app (React, Next.js, Supabase). Built solo in about a month; paused after completing the core product flow and architecture.
- **Healthcare Patient-Doctor Platform** — appointment booking, a symptom checker, and medical records in one place. Built full-stack with a college mate — github.com/sumitrawat2417/medical-triage-system

TECHNICAL SKILLS

Core: Python (5+ yrs), C/C++, Java, JavaScript, SQL, Bash, MicroPython

Web: HTML/CSS/JS, React, Next.js, Tailwind CSS, PWA development

Embedded & IoT: Arduino, ESP32 / ESP32-S3 / ESP8266, Raspberry Pi Pico, WiFi/BLE/NFC/RFID, firmware development

Databases: MySQL, Supabase, PostgreSQL, SQLite, Firebase

Tools: Git/GitHub, Linux, Figma
